Manufacturing FP&A; Integrated Financial Model

Independent Portfolio Project | Hypothetical Manufacturing Company

Developed an integrated financial planning and analysis model to demonstrate driver-based forecasting, operational finance analysis, financial statement modeling, variance analysis, scenario planning, and management reporting.

Model Scope

Revenue & Demand	Operations & Cost	Financial Planning	Decision Support
Revenue forecasting Volume & pricing drivers	Production & yield Direct labor & overhead Sourcing & FX	P&L; & cash flow Working capital CapEx & depreciation	Budget vs. forecast Variance analysis Scenario analysis KPI dashboard

Integrated Model Flow

Assumptions	Growth, margin, working-capital and FX drivers
Operating Schedules	Revenue -> Production -> Sourcing -> Labor / Overhead -> Headcount / OpEx -> CapEx
Financial Statements	Integrated P&L;, working capital and cash-flow forecast
Analysis	Budget-to-forecast variance, driver analysis and scenarios
Management Reporting	Financial and operational KPI dashboard with model checks

Project Highlights

• Built linked operating schedules to connect business drivers with consolidated financial forecasts.

• Modeled production, labor, manufacturing overhead, sourcing, foreign exchange, working capital and capital expenditures.

• Developed budget-to-forecast variance analysis and scenario modeling to evaluate changes in key business drivers.

• Created management reporting focused on profitability, liquidity, capacity and operating performance.

Financial Outputs & FP&A; Capabilities

Illustrative outputs based on hypothetical assumptions

$50.0M 2025A Revenue	**$52.5M** 2026 Forecast Revenue	**31.0%** 2026 Forecast Gross Margin
$8.0M 2026 Forecast EBITDA	**15.3%** 2026 EBITDA Margin	**$10.1M** 2026 Ending Cash

Skills Demonstrated

Budgeting & Forecasting	Driver-based actual, budget, forecast and long-range planning.
Revenue Analysis	Product-level volume and pricing assumptions.
Variance Analysis	Budget-to-forecast comparison and financial performance drivers.
Operational Finance	Production, labor, overhead, sourcing, FX and capacity analysis.
Working Capital	AR, inventory, AP, DSO, DIO, DPO and cash conversion cycle.
Capital Planning	CapEx and depreciation schedules linked to cash flow.
Scenario Analysis	Base, upside and downside sensitivity analysis.
Management Reporting	Financial and operational KPI reporting for decision support.

Portfolio Note

This is an independent portfolio project developed using hypothetical manufacturing data to demonstrate FP&A; and financial modeling capabilities. It is not client work or professional manufacturing employment.
